

### **In Th Specification**

Please amend the specification as follows:

Amend the paragraph starting on Page 11, line 13 as follows:

From the aforementioned description of the preferred embodiments of the electrical appliance of the present invention, it is apparent that insertion of the prongs 340 of the plug portion 349 into the insert holes 335 in the socket member 33 can activate the winding unit 34 to wind the electrical wire 345. Thus, it is necessary for the user to unplug the plug portion 349 of the electrical wire 345 from the outlet of the power supply before the electrical wire 345 is wound up, thereby preventing the electrical wire 345 from being subjected to a sudden pulling force when the user forgets to unplug the electrical wire 345. As such, the electrical appliance of the present invention is safer to use.
